

Business Intelligence Reporting

The ActiveH Business Intelligence Reporting module turns your housing data into information that can be harnessed to shape and monitor your service delivery. For tactical and strategic reporting a full set of over 200 Business Intelligence Reports are provided, across all housing modules.

From strategic scorecards, KPI information, through to operational awareness, our Business Intelligence solution provides all users with a role based view, right from the point they enter the system. From each report, users can view summaries and trends, access the detail that it was built from, then drill down into the system straight from a clickable link, right down to a specific element of data.

Users will find each of the KPI, Dashboard and Scorecard reports easy to use and with Business Intelligence Reporting expanded across each business area, there will be a mountain of information available.

In-depth computer or database knowledge is not necessary to tailor reports and where reports do not precisely match your needs, filter criteria can easily be applied to the report. Familiar grouping levels such as housing officer, scheme, area, ward, owning body and asset types are easily applied.

The ActiveH Business Intelligence Reporting module is simply a better way to report and manage your business.

Call us now for a free consultative meeting with one of our highly experienced housing systems consultants and receive a free report on the future of Housing Systems.

Maximising your investment...
Working with MIS will add significant benefits to your organisation also helping to minimise your spend
